Case Study 59: Learn Mint : Micro Course Marketplace

By Prathamesh More

Problem Statement

Many students find long courses difficult to complete and prefer shorter, focused learning modules.

There is a need for a platform where users can learn through simple micro-courses that are easy to access and complete.

The goal of this project is to develop Learn Mint, a web platform where users can:

- Browse different courses
- Open a course and watch lessons
- Track their learning progress
- Unlock lessons step-by-step

The platform aims to make learning simple, structured, and accessible.

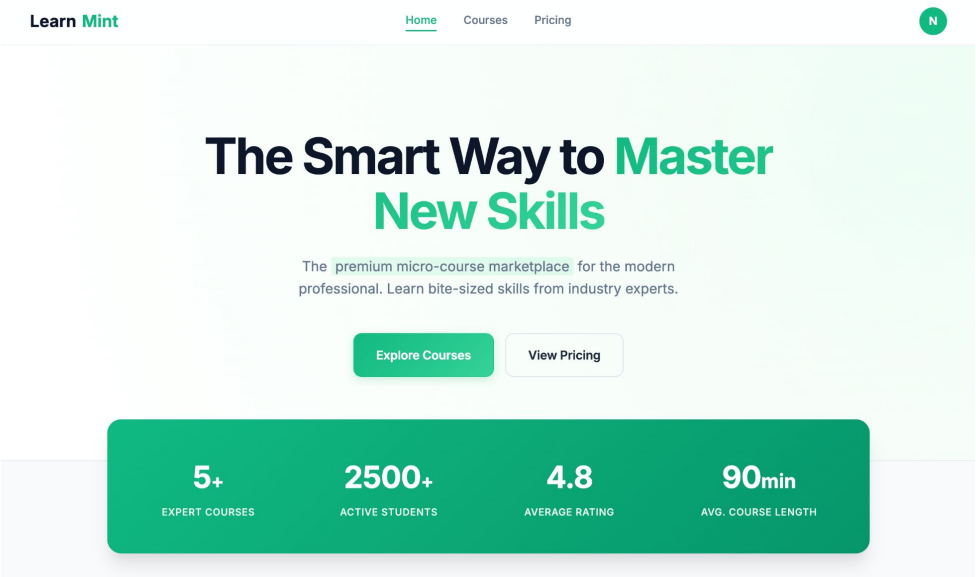
Your Solution

Learn Mint is a responsive micro-course marketplace website developed using **HTML, CSS, and JavaScript**.

The platform allows users to easily explore and learn new skills through short courses.

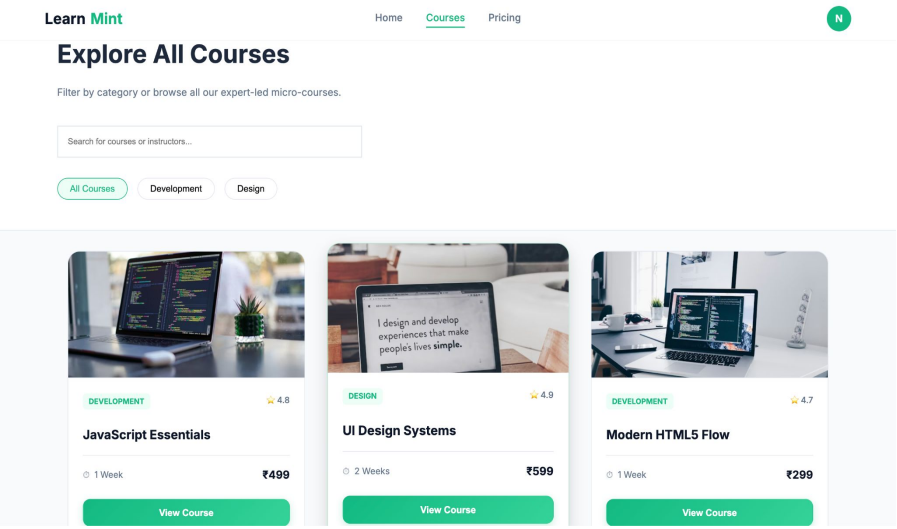
Key features of the system:

- Browse multiple micro-courses
- Open course pages and watch lesson videos
- Lessons unlock sequentially after completion
- Progress bar to track course completion
- Instructor information displayed for each lesson
- Dashboard to view enrolled courses and progress



Working of the System

- User opens the LearnMint website and can browse available courses.
- The Courses page displays different micro-courses with details like title, rating, duration, and price.
- When a user selects a course, the course detail page opens with a list of lessons and a video player.
- Lessons unlock sequentially, meaning the next lesson becomes available only after completing the previous one.
- The system updates the progress bar based on completed lessons.
- The Dashboard shows enrolled courses and the user's learning progress.



Conclusion

The Learn Mint platform provides a simple and effective way for users to learn through micro-courses.

The project demonstrates:

- A responsive multi-page website
- Easy browsing of courses
- Lesson-based learning system
- Progress tracking for users

This project shows how **HTML, CSS, and JavaScript** can be used to build an interactive learning platform.
